

PROFILE

I am a software engineer and a graduate of Damascus University. I build the product from the screen through to the data: Arabic and English interfaces, Laravel and FastAPI services, and a search system I tested with real ranking measures. I am looking for a software engineering role with a team in Dubai.

مهندس برمجيات من جامعة دمشق، أبنّي المنتج من الواجهة حتى البيانات، وأبحث عن دور في دبي.

SKILLS

INTERFACES

HTML, CSS,
JavaScript,
TypeScript, React,
Vite, Tailwind

SERVERS

PHP, Laravel, REST,
Python, FastAPI

SEARCH AND DATA

BM25, TF-IDF, SBERT,
SQLite, Streamlit

SYSTEMS

Java, ANTLR, Git,
GitHub

SELECTED WORK

01 KitchenX

2026

React · TypeScript · Tailwind · [kitchenx.vercel.app](#)

I built KitchenX for home chefs who sell their cooking. The desk covers the working day: chefs, meals, categories, orders, drivers, customers, coupons, settlements, and reports. I connected realtime notifications, and I shipped the interface in both Arabic and English, with forms checked before they are sent.

02 Information Retrieval System

2026

Python · FastAPI · Streamlit · [GitHub](#)

I built a search system as separate services, and I ran it on CORD-19 and MS MARCO. It indexes documents, finds them with TF-IDF, BM25, and Sentence-BERT, then merges those lists. I measured the ranking with MAP, nDCG, and precision, and I added a step that answers from the documents it actually retrieved.

03 Integrated Python Curriculum

2026

HTML · CSS · JavaScript · [Live site](#)

I designed an Arabic curriculum for technical institutes, from zero toward practice, in four levels. A student can move through a clear lesson index. The first level is the environment, variables, conditions, loops, and collections. Later levels build on that.

- 04

Python Adventure

React · Vite · Tailwind · [Live site](#)

I made a first step into Python for a beginner. The learner enters by name, then takes short missions. The first mission asks for the line that makes the computer say hello. Sessions, files, and a progress trail sit next to the lesson.

2026
- 05

Advanced Banking System

React · Laravel · [Interface](#) · [Server](#)

I built both sides. The server holds accounts, transactions, scheduled transfers, approvals, reports, and support tickets. The interface covers sign-in, password reset, users, approvals, and the same reports.

2025
- 06

Complaints System

React · Laravel · [Interface](#) · [Server](#)

I built a path for a complaint to move between administration, the agency, and the employee. Each case has a type, a department, and attachments, and I kept a history of what changed at every step.

2025
- 07

Compiler Front End

Java · ANTLR · [GitHub](#)

I wrote the front of a compiler for an Angular-shaped grammar. It reads the source, builds a parse tree and a symbol table, then walks that tree and reports semantic errors on test files.

2025
- 08

HyperWifi

HTML · CSS · JavaScript · [GitHub](#)

I built an Arabic page for requesting an internet subscription. It asks for the place, the number of floors, and the speed package, points out anything missing, and sends the request as a formatted WhatsApp message.
